ABSTRACT

The inventory of private foundation support for health manpower education and training presented in the document indicates the manner in which this important element in the private sector of the economy--the philanthropic foundation--supplements Federal and State support of health occupations training. The report deals only with private (and community) foundation support, since such data are not only public and easily available, but also serve to indicate the thrust provided by private financial sources to the development of health manpower education. The report is divided into three parts. The first is a description of the methodology used to obtain the data and a description of the coverage. The second provides a number of summary tables and a brief digest of the detailed listings. The final, and by far the largest part, presents a detailed listing (or inventory) or private foundations providing support in 1971, classified in three different ways: (1) alphabetically by foundation name; (2) by State of foundation; and (3) by State of recipient. PREFACE

Financial support for the education and training of health personnel takes many forms and comes from many sources. It may take the form of student tuition (by far the greatest component), endowments, gifts, research funding, patient-care revenue, individual scholarships and fellowships, or loan funds unique to an educational institution, among others. Among the sources of income are Federal, State, and local governments; corporations; and nonprofit organizations.

A series of studies of Federal aid for the education and training of health personnel have been published by the Department of Health, Education, and Welfare, but support from other sources has not been inventoried in any systematic way. As a result, in 1973 the Bureau of Health Resources Development's Division of Manpower Intelligence (dissolved as of March 1, 1974 in conjunction with a reorganization of the Bureau) initiated studies in two areas to help round out the picture of sources of financial support for health manpower training. The sources examined were State support and private support. An "Inventory of State Appropriations Supporting Education for the Health Professions, 1971-72" is in process of publication and should be available by the Fall of 1974. Foundation support, one part of total private support, is the subject of this report.

The inventory of private foundation support for health manpower education and training presented here indicates the manner in which this important element in the private sector of the economy--the philanthropic foundation--supplements Federal and State support of health occupations training. Although there are many other elements in the private sector that contribute to the support of health manpower education, this report deals only with private (and community) foundation support, since such data are not only public and easily available, but also serve to indicate the thrust provided by private financial sources to the development of health manpower education.

This report was initiated by the Division of Manpower Intelligence and completed by the Resource Analysis Staff, Howard V. Stambler, Acting Chief. It was prepared by Lucy M. Kramer, utilizing work done by Jack Maready, formerly of the Division of Manpower Intelligence.

INTRODUCTION

Although private foundation financial support is a relatively small part of the total support for health manpower education, it has played a key role in innovative approaches to health manpower training--development of new types of health careers; establishment of new schools and expansion of existing institutions; recruitment and support of minority groups into the health field; faculty and curriculum development; and general support. Foundation support will become increasingly important as attempts are being made by institutions to expand their support base by acquiring more non-Federal support.

Both because of the importance of foundation support and because data are more easily accessable and identifiable than information from other sources, this part of private support has been studied first.

Information on foundation support is available from the foundation Center, supported by 89 private foundations to gather and disseminate information on philanthropic foundations through library service, research, publications, etc. The Center maintains research libraries in New York City and Washington, D.C. where complete files of the annual reports from foundations required by the Internal Revenue Service are kept. These files may be consulted without charge, or may be purchased in film or microfiche.

To develop the data presented in this report, the Foundation Center's files in Washington were searched for material relating to health manpower education and training. In addition, the Foundation Center's "Grants Index" was searched and copies of pertinent annual reports and Internal Revenue Service forms were obtained.

Inasmuch as foundations report to the Internal Revenue Service over a long period of time, and many secure extensions of a year or more for filing, copies of their reports are generally not available for public perusal for some time after the close of a foundation's fiscal year (e.g., reports for 1972 will be complete late in the Spring of 1974). As a result, the data in this report, which are described as of 1971, actually cover a period beginning in 1970 or 1971 and ending in 1971 or 1972.

The report is divided into three parts. The first is a description of the methodology used to obtain the data and a description of the coverage. The second provides a number of summary tables and a brief digest of the detailed listings. The final, and by far the largest part, presents a detailed listing (or inventory) of private foundations providing support in 1971, classified in three different ways: (1) Alphabetically by foundation name; (2) by State of foundation; and (3) by State of recipient.

METHODOLOGY AND COVERAGE

The Internal Revenue Service form IRS 990-AR was the basic source of information for this study. Nonprofit organizations that have funds and programs managed by their own trustees or directors and whose purpose it is to maintain or aid social, educational, charitable, religious, or other activities serving the common good are required to file these reports annually with the Internal Revenue Service. All forms are open for public inspection. These forms are kept by the Foundation Center (mentioned earlier), which provided access to them for the Bureau of Health Resources Development staff for this study.

The Foundation Center catalogues its data in seven major categories as follows: Education, health, humanities, international activities, science and technology, religion, and welfare. An initial search was made of all of the category of health and of selected parts of the education, science and technology, and welfare categories for foundations concerned with health manpower education and training. From the annual reports and IRS forms for these foundations, photocopies were made of those that included identifiable grants for health manpower education. A thorough review of each of the IRS and annual reports from approximately 1,000 foundations was then made. In all cases, each page of a foundation IRS 990-AR form, in a blown-up photocopy of a microfiche, was studied. In many cases, the listings within a particular IRS report ran to over 25 pages of film and were extremely difficult to read even with a magnifying glass. Consequently, there may be some minor omissions or errors in the data included in this report.

Of the 1,000 or more annual reports or IRS 990-AR forms studied, 825 grants were clearly identified as providing private foundation financial support for health manpower education and training; these form the bulk of the grants presented in this report. Where support was not clearly identifiable as being for health manpower education (e.g., in total grants to hospitals which were not broken down into education, services, etc.), the grant was not included. Furthermore, only grants of $500 or more were included, since otherwise the inventory would have been of mammoth and unwieldy proportions. However, this eliminated many grants, particularly to schools of nursing in the form of scholarships (which were generally less than $500). In addition, where the grant was for mixed types of support including education but there were no means of separating out education support, such a grant was not included. All funding for health services and health research was also omitted. Because of these unavoidable omissions and the limited scope of the definition,

the figures may underestimate the total financial support for health manpower education from private foundations.

The summary information that follows provides a broad picture of individual private foundation philanthropic activity in the health manpower education field, and indicates the specific sources of funds, the nature and purpose of the financial support, and the types of health occupations which are being assisted. It also gives some indication of which foundations are concerned with health manpower education and training, for what specific purpose, and in what respect--e.g., scholarships and fellowships to minorities, construction funds for medical schools, funds for initiation or expansion of libraries, support for faculty education, etc. In addition, the data indicate a wide geographic spread of private funds in support of such education and training, since there were recipients in 43 States and the District of Columbia.

(Retyped at ERIC Clearinghouse in Career Education due to poor reproducing quality of original document.)

SUMMARY OF FINDINGS

• Overall, in support of health manpower education and training, 172 private and community foundations located in 26 States and the District of Columbia made a total of 825 grants, to as many recipients, in at least 43 States and the District of Columbia, totalling over $30 million in 1971. The median grant was $10,000, with the amount of individual grants ranging from $500 (the lower limit set for this report) to as high as $1 million. (Figure 1.)

• Of the 825 grants made in 1971, 814 were made to recipients in 43 States and the District of Columbia. Eleven grants were made to recipients located in various unspecified States. Such recipients were usually nursing schools in hospitals or similar institutions run by religious orders with branches in several States. (Table 1.)

• Nine States received more than $1 million each in total grants. These were States with several medical schools and many nursing schools.

• New York led all States in the number of grants received within the State. New York had 197 grants totalling $6,319,755, with individual grants ranging from $500 to $842,000. Illinois followed far behind, with 54 grants totalling $792,322, and a range of $500 to $82,800. Pennsylvania was third, receiving 52 grants totalling $1,405,429 and a range of $1,000 to $361,800; other States with 40 or more grants were New Jersey, Massachusetts, Tennessee, North Carolina, and California.

• In total amount of money received, the order of recipient States was somewhat different than for the number of grants. Although New York remained first, with a total of $6,319,755, Texas had the second largest amount--$2,186,397--although ranking ninth in number of grants. Other States with approximately $2 million in grants were Tennessee ($2,118,383), North Carolina ($2,014,160), and Massachusetts ($1,901,580).

• The largest single grants, of about $1 million, went to a medical school in Texas ($1 million) and to a medical school in Washington ($996,678). The third largest ($842,000) went to a fund in New York for medical fellowships to minorities, and the fourth largest ($750,000) to a medical school in Tennessee. (Table 1 and Table A-2.)

• The 825 grants went to 14 health professions categories: Allied health, dental health, medical, nursing (RN), nursing (practical), optometry, osteopathy, pharmacy, pre-professional, public health, veterinary

medicine, two types of mixed programs, and other (unspecified). The support was categorized in three broad types-- institutional, student, and other. (Table 2.)

- The greatest number of grants, 429 or 52 percent of the total, went for medical education. Nursing education (RN) was second, receiving 152 grants or 18 percent of the total. At the lower end of the scale were osteopathy with five grants and optometry with one grant.

- Medical education received 64 percent of all money granted--$19,530,821. Nursing (RN) received $3,483,702, or 11 percent of the total, again a far second.

- Institutional aid accounted for more than 52 percent of all money granted, student aid for 18 percent, and "other" (a combination of all undefined aid) 30 percent.

- In medical education, about one-third (151) of the grants went for institutional aid, accounting for $11,438,601 or 59 percent of the total for medical education. Ninety-nine grants (or 23 percent of the total) went for student aid, accounting for $2,183,550 or 11 percent of the total money awarded. The remainder of both grants and money for medical education were either of a mixed nature or were not clearly defined as to purpose.

- The grants for student support were for four types of awards: Loans, scholarships, fellowships, and other. The 241 student support grants represented 29 percent of the total awards; the $5,356,200 represented 18 percent of the money awarded. (Table 3.)

- The largest part of student aid was for scholarships--46 percent or 111 awards. About 16 percent of the grants (39) were for fellowships, while only 2 percent (5 grants) went for loans.

- More than one-third of all grants for student support and more than one-half of the money granted went to prepare students for careers in the health professions, to recruit minority students into the health professions, and to support them while in training. Slightly less than one-fifth of all student support went to minority students, amounting to 41 grants and $998,655. One-fourth of the support, $1,374,065 went for preparation of students for health careers. (Table 4.)

- The grants identified as for institutional aid were divided into eight types: General fund, building fund, faculty support, curriculum development, equipment, medical and health libraries, development fund, and other. The number of grants (302) represented 37 percent of the total number, and the funds ($15,832,081) 52 percent of the total money granted.

Table 2. Number and amount of private foundation grants for health manpower education and training, by health profession category and type of support: 1971

Support of minority students	41	998,655
Mixed, misc	9	311,542
Other types of support	282	9,277,243

- The largest number of grants in support of institutions--81 or 27 percent--went for curriculum development. One-fifth of the institutional support grants each went to medical and health libraries and faculty support. (Table 5.)

- Of all grants and funds awarded, minorities received about one-fifth--153 grants and $6,066,533 in funds. Black students received more than half the awards to minorities--$3,852,061 and 80 grants, mostly for medical education. Other specified minorities (e.g., Spanish speaking Americans, American Indians, etc.) received 38 grants and $1,528,032 in funds. Women students accounted for only six grants and $52,155. (Where aid was stated as applying to "Black women," the major category chosen was "Black," so the "women" category is understated. However, since nursing is not specifically categorized here for women and the vast proportion of assistance in nursing goes to women, grants to women probably amount to more than is shown in Table 6.)

- Although only 153 of the 825 grants were specifically earmarked for women and minority groups, it is interesting to note the manner in which assistance is funneled to minority groups, in particular Black students. The latter received their aid primarily through associations and medical schools. Of the money granted to Black students, 43 percent went through associations, and 54 percent through medical schools. (Table 7.)

- Of the 14 types of educational institutions that received awards, medical schools and medical centers received by far the largest number and amount--361 grants (44 percent of the total) and $14,503,753 (48 percent of total funds). Universities and colleges received $5,266,827 (123 grants) and associations received $4,391,329 (145 grants). Hospitals, as training institutions, received about one-tenth of the total grants--82 grants and $2,859,288. (Table 7.)

DETAILED LISTINGS OF GRANTS

The detailed listing of private foundation support for health manpower education and training presented here classifies the awards in three different ways:

The first table, Table A-1, provides a summary listing of the 172 foundations in alphabetical order, giving the State of the foundation, the total number of grants each foundation made, and the total amounts awarded.

The second table, Table A-2, lists the donor foundations by State of origin and in alphabetical order within each State. It shows the 825 recipients of the support by name, State, purpose of the grant (as given in the IRS 990-AR form), and amount of grant.

The third table, Table A-3, lists the recipients by State of origin and in alphabetical order within each State. Basic information relating to each grant appears again--foundation name, State, purpose, and amount. This table also contains codes for the health professions and type of support categories used in the summary tables. Explanation of these codes immediately precedes Table A-3.
